

APEXLOGIX TECH ROADMAP 2026

Engineering Milestones and Architecture Evolution

Core Platform Microservices Layout

- Decoupled telemetry ingestion uses high-speed MQTT brokers.
- Client requests route through an Auth-secured API Gateway.
- Postgres stores core configuration; TimescaleDB logs robot metrics.
- Redis cache reduces db load by 60% for frequent routing requests.

ApexLogix Core Microservices Architecture

Product & Tech Roadmap 2026 Timeline

- Q1 2026: Rollout multi-cloud active-active failover for Kubernetes cluster.
- Q2 2026: Ingestion v2 launch supporting up to 50,000 concurrent robot telemetry feeds.
- Q3 2026: Autonomous Drone pathing collision avoidance pilot program in Phoenix.
- Q4 2026: Edge Compute controller nodes deployment in global logistics centers.
